

本地安装一个不带密码的很简单，直接运行就行

```
docker run -d -p 5000:5000 --restart=always --name registry registry:2
```

安装一个带用户名和密码的

Create a password file with one entry for the user testuser, with password testpassword:

1, 创建密码

```
1 mkdir auth
2 docker run \
3   --entrypoint htpasswd \
4   httpd:2 -Bbn testuser testpassword > auth/htpasswd
```

2, 启动docker-registry

```
1 docker run -d \
2   -p 5000:5000 \
3   --restart=always \
4   --name liuqianli-registry \
5   -v "$(pwd)"/auth:/auth \
6   -e "REGISTRY_AUTH=htpasswd" \
7   -e "REGISTRY_AUTH_HTPASSWD_REALM=Registry Realm" \
8   -e REGISTRY_AUTH_HTPASSWD_PATH=/auth/htpasswd \
9   -v "$(pwd)"/certs:/certs \
10  -e REGISTRY_HTTP_TLS_CERTIFICATE=/certs/domain.crt \
11  -e REGISTRY_HTTP_TLS_KEY=/certs/domain.key \
12  registry:2
```

3,登录

```
1 docker login myregistrydomain.com:5000
```
