

xarges的用法

当我们的服务器，需要在命令行批量操作一些数时可用

比如，执行以下命令后，需要把这些pod 都删除，如果一个一个的删除，那就太慢了，可以使用以下用法

```
1 kubectl get pod -n kube-system |grep nginx | awk '{print $1}' |xargs kubectl -n kube-system delete pod
```

xarges 会默认把参数传在最后面，如果需要在中间传参，

```
1 kubectl get pod -n kube-system |grep nginx
```

```
liuqiang@devops01-ubuntu:~$ kubectl get pod -n kube-system |grep nginx
